

I still have a lot left in me

A clinically meaningful combination⁶

CYRAMZA + erlotinib demonstrated 19.4 months of median PFS vs 12.4 months with erlotinib alone in the ITT population⁶

- ~1 in 3 patients survived 2 years or longer without progression when treated with CYRAMZA + erlotinib (32.4% vs 22.9% with placebo + erlotinib)¹⁴

CI=confidence interval; HR=hazard ratio.

I'm in this for as long as I can be

Consistent PFS improvements across common EGFR mutation types¹²

CYRAMZA + erlotinib offered more than 19 months of median PFS to patients in RELAY with exon 21 (L858R) mutation

RELAY trial—PFS by EGFR mutation type: **exon 21** (prespecified subgroup analysis)

Reprinted from *Lancet Oncol*, doi:10.1016/S1470-2045(19)30634-5, Nakagawa K, Garon EB, Seto T, et al, Copyright (2019), with permission from Elsevier.

RELAY was not powered for subgroup analyses. Results of the subgroup analyses should be interpreted with caution.

I'm in this for as long as I can be

Consistent PFS improvements across common EGFR mutation types¹²

CYRAMZA + erlotinib offered more than 19 months of median PFS to patients in RELAY with exon 19 deletion

RELAY trial—PFS by EGFR mutation type: **exon 19** (prespecified subgroup analysis)

Reprinted from *Lancet Oncol*, doi:10.1016/S1470-2045(19)30634-5, Nakagawa K, Garon EB, Seto T, et al, Copyright (2019), with permission from Elsevier.

RELAY was not powered for subgroup analyses. Results of the subgroup analyses should be interpreted with caution.

I'm not done yet

CYRAMZA + erlotinib demonstrated a consistent PFS benefit across all clinically relevant subpopulations^{12,14}

Median PFS improvement in the CYRAMZA + erlotinib arm was consistent with the overall study population across race—19.4 months in Asian patients and 21.4 months in Caucasian patients¹⁴

PFS analysis by subgroup, ITT population^{12,14}

Category	Subgroup	CYRAMZA + erlotinib	Placebo + erlotinib	Favors CYRAMZA + erlotinib ← → Favors placebo + erlotinib		HR (95% CI)
		Patients	Patients	0.2	1.0 1.6	
Overall		224	225			0.64 (0.51, 0.81)

Supportive outcome measures¹²

DoR: Median—Months

HR=0.62 (95% CI: 0.48, 0.81); $P=0.0003$

18.0 MONTHS
(13.9, 19.8)

VS

11.1 MONTHS
(9.7, 12.3)

CYRAMZA + erlotinib (n=171)

Placebo + erlotinib (n=168)

- DoR was defined as time from first documented response to the date of objective progression or the date of death, whichever is earlier
- The percentage of events at the time of analysis was 59% (101 patients) and 76% (128 patients) in the CYRAMZA + erlotinib and placebo + erlotinib treatment arms, respectively

ORR: Percentage of Patients (95% CI)

76%
(71, 82)

VS

75%
(69, 80)

CYRAMZA + erlotinib (n=224)

Placebo + erlotinib (n=225)

- ORR was defined as CR + PR. ORR does not include SD
- Disease progression and tumor response were assessed by investigators in accordance with RECIST 1.1
- ORR was not statistically significantly different between treatment arms

The DCR was 95% and 96% in the CYRAMZA + erlotinib and placebo + erlotinib arms, respectively

- DCR was defined as CR + PR + SD

CR=complete response; PR=partial response; RECIST=Response Evaluation Criteria in Solid Tumors; SD=stable disease.
